DESCRIPTIONS

Opioid Treatment Program Core Program Standards

Court Treatment (CT)

Court Treatment programs provide comprehensive, integrated behavioral health services that work in conjunction with the judicial system. The purpose of court treatment programs is to appropriately respond to the abuse of alcohol and/or other drugs, mental illness, post traumatic stress disorder, family problems, or other concerns and their related criminal and/or civil judicial actions, in order to reduce recidivism and further involvement in the criminal justice system. Court treatment includes services provided to persons referred through various types of problem-solving courts including drug, mental health, veterans', family dependency, tribal, re-entry, and others.

The treatment team works in collaboration with judges, prosecutors, defense counsel, probation authorities, law enforcement, pretrial services, treatment programs, evaluators, and an array of local service providers. Treatment is usually multi-phased and is typically divided into a stabilization phase, an intensive phase, and a transition phase. During each phase, the treatment team is responsible for assessing the behavioral health needs of the person served within the parameters of the legal sanctions imposed by the court. The treatment team either directly provides or arranges for the provision of screening and assessment, case management, detoxification, intensive outpatient treatment, outpatient, residential treatment, medication use, self-help and advocacy, recovery, health and wellness, relapse prevention, and education regarding factors contributing to the person's court involvement.

A court treatment program may be a judicial or law enforcement organization that provides or contracts for the identified services or may be a direct treatment provider working as part of the court treatment team.

Detoxification

Detoxification treatment means the dispensing of an opioid agonist treatment medication in decreasing doses to the persons served to alleviate adverse physical or psychological effects incident to withdrawal from the continuous or substantial use of an opioid drug and as a method of bringing the person served to a drug-free state within such a period. A short-term detoxification is up to 30 days, and a long-term detoxification is from 31 to 180 days.

Detoxification (detox) services are intended to help the persons served reduce or eliminate their use of illicit drugs while improving their quality of life and functioning. Opioid treatment programs follow rehabilitation stages of sufficient duration to meet the needs of the persons served. These stages include initial treatment of zero to seven days in duration, early stabilization lasting up to eight weeks, long-term treatment, medically-supervised withdrawal, detoxification, medical maintenance, and immediate emergency treatment when needed.

Day Treatment

Day treatment programs are time-limited, medically-monitored programs that offer

comprehensive, intensive, individually planned, coordinated, and structured services.

A day treatment program consists of a scheduled series of structured, face-to-face therapeutic sessions organized at various levels of intensity and frequency in order to assist the persons served in achieving the goals identified in their individual treatment plans. Day treatment programs are offered four or more days per week, typically with some availability in the evenings and on weekends. Such a program functions as a step-down or alternative to inpatient care or partial hospitalization, as transitional care following an inpatient or partial hospitalization stay in order to facilitate return to the community or to prevent or minimize the need for a more intense or restrictive level of treatment. Day treatment programs are more intensive than outpatient treatment and serve persons who need a structured behavioral health setting for daytime activities.

Integrated Behavioral Health/Primary Care (IBHPC)

Integrated Behavioral Health/Primary Care programs have an identified level of medical supervision and are supported by an “any door is a good door” philosophy. These programs allow for choice and are capable of assessing the various medical and behavioral needs of persons served in an integrated manner. Programs demonstrate competency to identify and treat behavioral health concerns, such as mental illness and substance use disorders, and general medical or physical concerns in an integrated manner. Integration is the extent to which care is coordinated across persons, functions, activities, and sites over time to maximize the value of services delivered to persons served. Programs may also serve persons who have intellectual or other developmental disabilities and medical needs, or those who are at risk for or exhibiting behavioral disorders.

Models may include, but are not limited to, the following: contractual, where two separate, legal entities enter into an agreement to staff and operate a single program either at a location specifically identified for the provision of integrated care or located within another institution (such as a school-based health center); a distinct, integrated program located within a larger entity such as a Veterans Health Administration campus; the colocating of complementary disciplines such as the placement of behavioral staff in a primary care setting (as in a federally qualified health center) or primary care staff in a community mental health center; or a single organization that incorporates both behavioral health and primary care services into an integrated model. Although most integrated models focus on primary care, the standards could also be applied to an integrated system located in specialty care settings such as Ob-Gyn and HIV.

Intensive Outpatient Treatment (IOP)

Intensive outpatient treatment programs are clearly identified as a separate and distinct program. The intensive outpatient program consists of a scheduled series of sessions appropriate to the person-centered plans of the persons served. These may include services provided during evenings and on weekends or interventions delivered by a variety of service providers in the community. The program can function as a step-down program from partial hospitalization, detoxification, or residential services; may be used to prevent or minimize the

need for a more intensive and restrictive level of treatment; and is considered to be more intensive and integrated than traditional outpatient services.

Outpatient Treatment (OT)

Outpatient treatment programs provide services that include, but are not limited to, individual, group, and family counseling and education on recovery and wellness. These programs offer comprehensive, coordinated, and defined services that may vary in level of intensity.

Outpatient programs may address a variety of needs, including, but not limited to, situational stressors, family relations, interpersonal relationships, mental health issues, life span issues, psychiatric illnesses, addictions (such as alcohol or other drugs, gambling, and internet), eating or sexual disorders, and the needs of victims of abuse, domestic violence, or other trauma.

Residential Treatment (RT)

Residential treatment programs are organized and staffed to provide both general and specialized nonhospital-based interdisciplinary services 24 hours a day, 7 days a week for persons with behavioral health disabilities or co-occurring disabilities, including intellectual or developmental disability; victims or perpetrators of domestic violence or other abuse; or persons needing treatment because of eating or sexual disorders or drug, gambling, or internet addictions. Residential treatment services are organized to provide environments in which the persons reside and receive services from personnel who are trained in the delivery of services for persons with behavioral health disorders or related problems. Residential treatment may be provided in freestanding, nonhospital-based facilities or in clearly identified units of larger entities, such as a wing of a hospital. Residential treatment programs may include domestic violence treatment homes, nonhospital addiction treatment centers, intermediate care facilities, psychiatric treatment centers, or other nonmedical settings.

Criminal Justice (CJ)

Criminal justice programs serve special populations comprised of accused or adjudicated individuals referred from within the criminal justice system who are experiencing behavioral health needs, including alcohol or other drug abuse or addiction, or psychiatric disabilities or disorders. Services can be provided through courts, through probation and parole agencies, in community-based or institutional settings, or in sex offender programs. Institutional settings may include jails, prisons, and detention centers. The services are designed to maximize the person's ability to function effectively in the community. The criminal justice mandates include community safety needs in all judicial decisions and require that behavioral health programs are aware of the safety requirements of not only the individual, program staff members, and peers, but also the community at large.

Criminal justice educational programs may include either community-based or institution-based educational and training services. Such programs may include personal and interpersonal skills training, conflict resolution, anger management, DUI/DWI education, mental health education, education about alcohol and other drugs, information on criminal thinking patterns, or traditional academic education.
